DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-28 and 31-35, drawn to a self-dispensing system with a driving mechanism, classified in class 422, subclass 100.
 - II. Claims 29 and 30, drawn to a self-dispensing system without a driving mechanism, classified in class 422, subclass 58.
 - III. Claims 36-42, drawn to a method for self-dispensing a measured quantity of a sample, classified in class 436, subclass 180.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are not disclosed as capable of use together and they have different modes of operation, function, or effects. Invention I requires a drive mechanism for automating dispensation. Invention II does not require a drive mechanism, and a sample may be manually dispensed as in a pipette.
3. Inventions I and III are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the process as

Art Unit: 1743

claimed can be practiced by another materially different apparatus, such as a test strip, dipstick, flow cytometer, or microfluidic device.

4. Inventions III and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the process as claimed can be practiced by another materially different apparatus, such as a test strip, dipstick, flow cytometer, or microfluidic device.

5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

6. Claim 1 is generic to a plurality of disclosed patentably distinct species comprising seven different types of dispensing mechanisms:

Claims 9, 18, and 20: time and pressure type pump, membrane pump, and two-dimensional pumps

Claim 17: cow udder

Claim 19 : embedded balls

Claim 21: rotary valve

Claim 22: steam engine

7. Applicant is required under 35 U.S.C. 121 to elect a single disclosed species, even though this requirement is traversed.

Art Unit: 1743

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

8. A telephone call was made to Mike Jones on 11/6/2002 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
